ABOUT ME

Data Engineer with 5+ years of experience designing, building, and optimizing scalable data platforms in cloud environments (AWS). Strong background in ETL/ELT pipelines, data modeling, and distributed processing using PySpark and Databricks.

Proven track record of improving data reliability, performance, and business decision-making through high-impact data solutions. Experienced in working closely with stakeholders to translate business needs into robust and scalable data architectures.

WORK EXPERIENCE

Itaú Unibanco | 2025- Present

Mid-level Data Engineer

- Act as a Data Engineer embedded within business teams, partnering closely with stakeholders to translate analytical requirements into scalable data solutions
- Conduct deep technical discovery of legacy pipelines, mapping data flows, dependencies, and undocumented business rules
- Identified and resolved critical issues in legacy systems, including recurring job failures, inconsistent outputs, and performance bottlenecks
- Led the end-to-end refactoring of data pipelines, significantly improving performance, maintainability, and reliability
- Migrated legacy processes (Pandas/SQL-based) to PySpark, enabling scalable distributed processing
- Implemented data quality frameworks and validation layers, reducing inconsistencies and production incidents
- Designed and deployed monitoring and alerting mechanisms, proactively identifying failures before business impact
- Stabilized critical pipelines, reducing recurring failures and increasing trust in data products
- Built new data solutions from scratch with a strong focus on scalability, performance, and long-term maintainability

iFood | Sep 2024 - Jul 2025

Mid-level Data Engineer

- Developed scalable data pipelines using PySpark and Databricks, processing large-scale datasets efficiently
 - Collaborated with data scientists, analysts, and engineers to deliver end-to-end data solutions
 - Designed and implemented self-service data platforms, increasing data accessibility across teams
 - Implemented data quality processes, including validation, consistency checks, and automated safeguards
 - Built ingestion pipelines integrating multiple sources (APIs, S3, databases) with high reliability
 - Applied software engineering best practices (modularization, version control, testing) to data pipelines
 - Monitored and maintained workflows ensuring high availability and data integrity
-

WORK EXPERIENCE

Creditas | Aug 2029 - sep 2024

Data Engineer

- Designed and maintained end-to-end ETL/ELT pipelines, from ingestion to analytical consumption
- Built and orchestrated workflows using Apache Airflow, ensuring reliability and observability
- Developed Python-based data solutions, including automation and API integrations
- Optimized complex SQL queries on Amazon Redshift, improving performance on large datasets
- Designed and implemented dimensional data models for analytics and reporting
- Developed and integrated REST APIs for data ingestion and distribution
- Worked with AWS ecosystem and implemented CI/CD pipelines with Git and IaC
- Contributed to agile squads delivering high-impact data products

Key Achievements:

- Built a near real-time abandoned cart recovery pipeline via API, enabling CRM activation strategies
- Developed data products for credit policy, improving decision-making accuracy
- Integrated Redshift with external Martech platforms, enabling 360° customer view and advanced segmentation
- Led the restructuring of a benefits Data Warehouse, significantly improving performance and maintainability

SKILLS

- | | | |
|------------------------|------------------|-------------|
| • Python, SQL, Pyspark | • Apache Airflow | • APIs REST |
| • AWS | • Git and Github | |

CERTIFICATIONS

- AWS Certified Cloud Practitioner (AWS)
